Good Evening Sir,

I am writing to you to fix a proper time slot to finalize my proposal for the end semester project presentation.

As you know, my end semester project (HELIX) is concerned with a fingerprint mechanism that tracks each student's biometric. As of now, I have programmed it using an ESP-32 and a R307 Fingerprint Module. These two components are our main hardware. Since we have had past concerns regarding the mass viability of this system, i.e. Implementing the hardware component into multiple classes, I have discovered that instead of using proprietary materials, we can use the inbuilt fingerprint module present in most laptops. I would like to explain this in detail with you as it eliminates the need to purchase the hardware components in bulk. I have two free periods on Wednesday from 1:00 PM to 3:00 PM. I also have another free period on Tuesday at 11:00 AM. Please reach back out to me before Thursday as Friday is the tentative date of submission.

Thank you for your time and support.

Warm Regards,
Karthik Reddy
